PLAN DATA

Plan Title: Plumtree
Plan File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.p01

Geometry Title: Plumtree
Geometry File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.g01

Flow Title : Plumtree
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f01

Plan Description:
Existing conditions of Plumtree Branch. Steady flow conditions.

Plan Summary Information:
Number of: Cross Sections = 85 Multiple Openings = 0
Culverts = 6 Inline Structures = 0
Bridges = 2 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

FLOW DATA

Flow Title: Plumtree

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

```

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Warning: During the supercritical analysis, the program could not converge on a supercritical answer in the downstream cross
section. The program used the solution with the least error.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Culv Crt Depth (ft)	5.00	Min El Weir Flow (ft)	371.57

Warning: During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of
energy within the specified tolerance and number of trials. The program used the solution with the minimum error.
Warning: During the culvert inlet control computations, the program could not balance the culvert/weir flow. The reported
inlet energy grade answer may not be valid.
Warning: During the culvert outlet control computations, the program could not balance the culvert/weir flow. The reported
outlet energy grade answer may not be valid.
Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet

equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Upstream Embankment side slope = 0 horiz. to 1.0 vertical
Downstream Embankment side slope = 0 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow = .98
Elevation at which weir flow begins =
Energy head used in spillway design =
Spillway height used in design =
Weir crest shape = Broad Crested

Number of Bridge Coefficient Sets = 1

Low Flow Methods and Data
Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
Pressure and Weir flow
Submerged Inlet Cd =
Submerged Inlet + Outlet Cd = .8
Max Low Cord =

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Flow Title : Plumtree
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f01

Plan Description:
Proposed condition which includes replacing the US 40 culvert with a bridge.

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 5	Inline Structures	=	0
	Bridges	= 3	Lateral Structures	=	0

Computational Information

Water surface calculation tolerance	= 0.01
Critical depth calculation tolerance	= 0.01
Maximum number of iterations	= 20
Maximum difference tolerance	= 0.3
Flow tolerance factor	= 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note:    During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note:    The culvert inlet is submerged and the culvert flows full over part or all of its length.
Therefore, the culvert inlet
         equations are not valid and the supercritical result has been discarded.  The outlet answer
will be used.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Energy head used in spillway design         =
Spillway height used in design              =
Weir crest shape                            = Broad Crested

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Pressure and Weir flow
           Submerged Inlet Cd          =
           Submerged Inlet + Outlet Cd =      .8
           Max Low Cord                =

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f01

Plan Description:
Proposed condition which includes replacing the Frederick Rd, US 40, Longview Dr, Brookmede Rd, and Hearthstone Rd culverts with bridges.

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 1	Inline Structures	=	0
	Bridges	= 7	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation
was used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected
from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the downstream end, the energy is based on critical depth over the weir.
The water surface has been projected.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation
was used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected
from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the downstream end, the water surface and energy have been projected
from the downstream cross section. The selected bridge modeling method does not compute answers inside the
bridge.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate
the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: For the final momentum answer at the bridge, the upstream energy was computed lower than the
downstream
         energy.  This is not physically possible, the momentum answer has been disregarded.
Note:    Momentum answer is not valid if the water surface is above the low chord or if there is weir
flow.  The momentum
         answer has been disregarded.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest,
valid, water surface was used.
Note:    Multiple critical depths were found at this location.  The critical depth with the lowest,
valid, water surface was used.

Note: The momentum method has computed a class B profile.
Note: The downstream water surface is below the minimum elevation for pressure flow. The sluice gate equations were
used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected
from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the downstream end, the energy is based on critical depth over the weir.
The water surface has been projected.

PLAN DATA

Plan Title: Plumtree_C_Culvert Diversion
Plan File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.p04

Geometry Title: Plumtree_C_Culvert Diversion
Geometry File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.g03

Flow Title : Plumtree
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f01

Plan Description:
Proposed condition which includes a 5' culvert for diversion from RS 6454 to RS 4289. Assumed outfall downstream of US 40. (Jack and bore) Modeled as a culvert in a lateral weir structure.

Plan Summary Information:
Number of: Cross Sections = 85 Multiple Openings = 0
Culverts = 6 Inline Structures = 0
Bridges = 2 Lateral Structures = 1

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Appendix H-5

Plumtree Branch: Option D Hydraulic Modeling

SCS TR-55 RUNOFF CURVE NUMBER

JOB NAME: Valley Mede Flood Study, Howard County
Ultimate Land Use, Fair Conditions
Drainage Area #3a - Greenway Drive Storm Drain

DATE: 09/21/17
JOB NO.: 5635-49

COMPUTED BY: HBH
CHECKED BY: CEL

STUDY POINT: Greenway Drive Storm Drain

CONDITION: X ULTIMATE
EXISTING

RUNOFF CURVE NUMBER COMPUTATION

HYDROLOGIC SOIL GROUP	LAND USE	RUNOFF CURVE NO.	Area (ft^2)	AREA (ac)	RCN x A
D	Impervious - rds paved open ditch (incl ROW)	98	13,670	0.314	30.75
B	Residential - 1/2 Acre	76	2,804,533	64.383	4893.12
C	Residential - 1/2 Acre	84	87,449	2.008	168.63
D	Residential - 1/2 Acre	88	5,914	0.136	11.95
B	Urban district - commercial/business	94	39,809	0.914	85.91
D	Urban district - commercial/business	96	91,280	2.096	201.17
		TOTAL	**3,042,655**	**69.850**	**5391.53**
				MI^2	**0.1091**

WEIGHTED RUNOFF CURVE NUMBER = **TOT RCN x AC =** **5391.53** = **77.188**
TOTAL ACRES **69.85**

TR-55 TIME OF CONCENTRATION WORKSHEET

DRAINAGE AREA: Valley Mede Floodplain Analysis
Existing/Proposed Tc BY: CEL
Drainage Area #3a - Greenway Drive Storm Drain

OVERLAND FLOW

Flow Segment Name	A3B3	
Surface Description	Grass (Dense)	
Roughness Coefficient	0.24	
Land Slope (ft/ft)	0.030	
Flow Length (ft) [100' max]	100.00	
Two-Year Rainfall (in.)	3.19	
Flow Time (hr.)	0.2025	0.203

SHALLOW CONCENTRATED FLOW

Flow Segment Name	B3C3			
Flow Length (ft)	913			
Paved or Unpaved	Unpaved			
Land Slope (ft/ft)	0.034			
Flow Velocity (ft/sec.)	2.9735			
Flow Time (hr.)	0.0853			0.085

CHANNEL FLOW

Flow Segment Name						
Flow Depth (ft)						
Bottom Width (ft)						
Side Slope (Z1)						
Side Slope (Z2)						
Manning's Coefficient						
Flow Length (ft)						
Channel Slope (ft/ft)						
Flow Velocity (ft/sec.)						
Flow Time (hr.)						0.000

PIPE FLOW (Assuming full flow)

Flow Segment Name	C3D3a					
Pipe Diameter (ft)	4.00					
Manning's Coefficient	0.024					
Pipe Slope (ft/ft)	0.018					
Pipe Length (ft)	2094					
Flow Velocity (ft/sec.)	8.286					
Flow Time (hr.)	0.0702					0.070

TIME OF CONCENTRATION (hr.)/(min)	0.358	21.48

HY-8 Culvert Analysis Report

Project Notes

Project Title: Valley Mede Flood Study

Designer: CEL

Project Date: Monday, September 25, 2017

Notes: HY-8 for Greenway Drive storm drain extension capacity, Option D.

Project Units: U.S. Customary Units

Outlet Control Option: Profiles

Exit Loss Option: Standard Method

Crossing Notes: Greenway Diversion

Crossing Discharge Data

Discharge Selection Method: Specify Minimum, Design, and Maximum Flow

Minimum Flow: 0 cfs

Design Flow: 146 cfs

Maximum Flow: 250 cfs

Table 1 - Summary of Culvert Flows at Crossing: Greenway Diversion

Headwater Elevation (ft)	Total Discharge (cfs)	Diversion Discharge (cfs)	Roadway Discharge (cfs)	Iterations
369.50	0.00	0.00	0.00	1
371.38	25.00	25.00	0.00	1
372.24	50.00	50.00	0.00	1

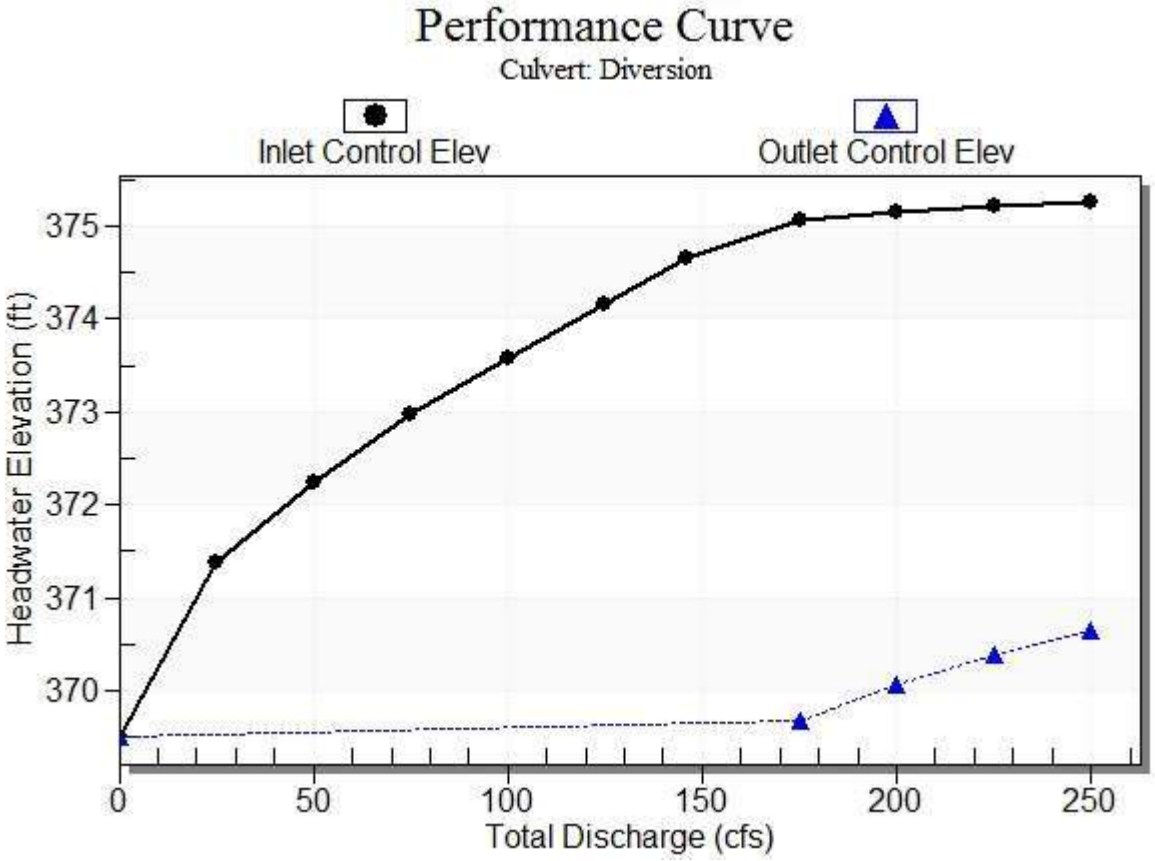
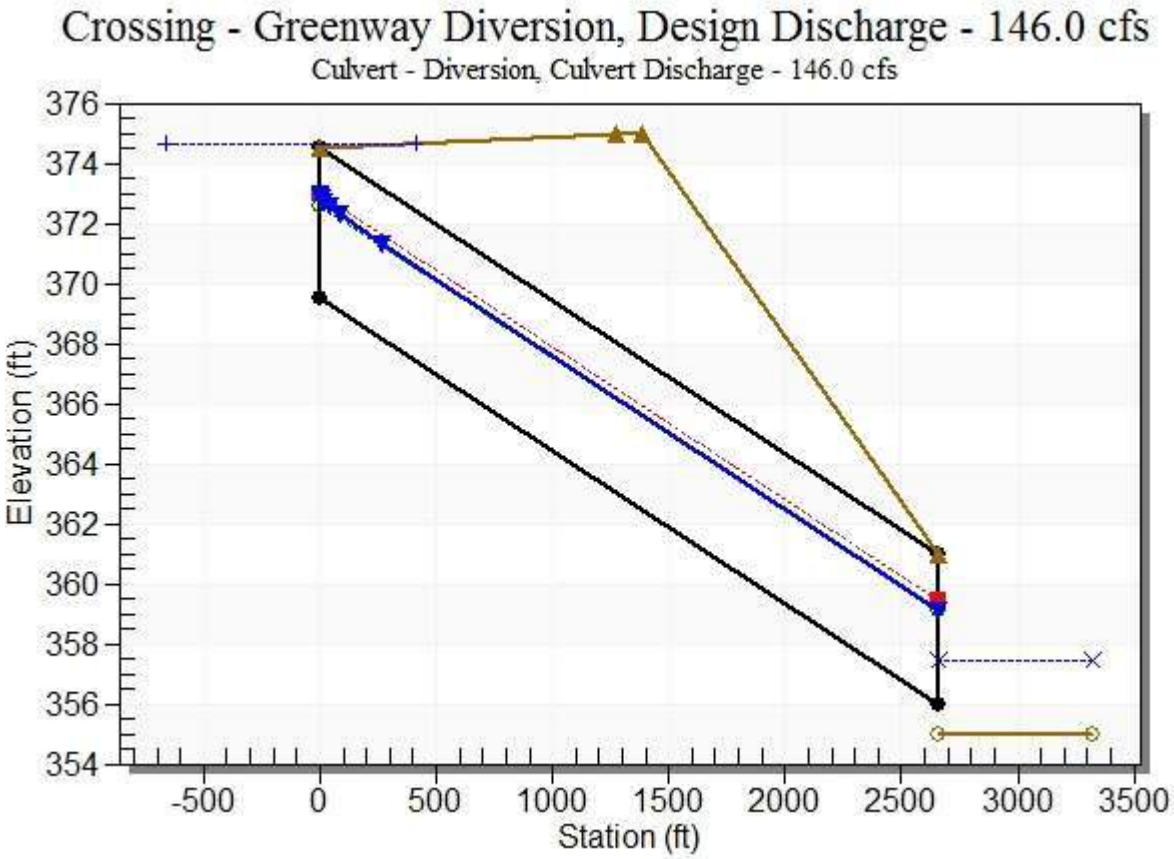
Culvert Performance Curve Plot: Diversion



Water Surface Profile Plot for Culvert: Diversion



Site Data - Diversion

Site Data Option: Culvert Invert Data

Inlet Station: 0.00 ft

Inlet Elevation: 369.50 ft

Outlet Station: 2660.00 ft

Outlet Elevation: 356.00 ft

Number of Barrels: 1

Culvert Data Summary - Diversion

Barrel Shape: Circular

Barrel Diameter: 5.00 ft

Barrel Material: Concrete

Embedment: 0.00 in

Barrel Manning's n: 0.0120

Culvert Type: Straight

Inlet Configuration: Grooved End in Headwall

Inlet Depression: None

Table 3 - Downstream Channel Rating Curve (Crossing: Greenway Diversion)

Flow (cfs)	Water Surface Elev (ft)	Depth (ft)	Velocity (ft/s)	Shear (psf)	Froude Number
0.00	355.00	0.00	0.00	0.00	0.00
25.00	355.94	0.94	2.08	0.20	0.42

PLAN DATA

Plan Title: Plumtree_D_Greenway Diversion
Plan File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.p05

Geometry Title: Plumtree
Geometry File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.g01

Flow Title : Plumtree_D_Greenway Diversion
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f13

Plan Description:
Proposed condition which includes a 5' culvert for diversion along Greenway Drive. Assumed outfall downstream of Frederick Rd, tying into existing storm drain and outfalling into channel. Modeled as a flow reduction based on an approximated maximum capacity of the proposed 5' storm drain.

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 6	Inline Structures	=	0
	Bridges	= 2	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Culv Crt Depth (ft)	3.26	Min El Weir Flow (ft)	371.57

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Warning: During the supercritical analysis, the program could not converge on a supercritical answer in the downstream cross
section. The program used the solution with the least error.
Note: During the supercritical analysis, the water surface at the inlet was within 0.01 feet of normal depth. Therefore,
the outlet will be at normal depth.
Note: The flow in the culvert is entirely supercritical.

CULVERT OUTPUT Profile #10-YR Culv Group: Culvert #1

Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Upstream Embankment side slope = 0 horiz. to 1.0 vertical
Downstream Embankment side slope = 0 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow = .98
Elevation at which weir flow begins =
Energy head used in spillway design =
Spillway height used in design =
Weir crest shape = Broad Crested

Number of Bridge Coefficient Sets = 1

Low Flow Methods and Data
Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
Pressure and Weir flow
Submerged Inlet Cd =
Submerged Inlet + Outlet Cd = .8
Max Low Cord =

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

HY-8 Culvert Analysis Report

Project Notes

Project Title: Valley Mede Flood Study

Designer: CEL

Project Date: Monday, September 25, 2017

Notes: HY-8 for Michaels Way crossing and Pond #1 upstream of Michaels Way.

Project Units: U.S. Customary Units

Outlet Control Option: Profiles

Exit Loss Option: Standard Method

Crossing Notes: Michaels Way

Crossing Discharge Data

Discharge Selection Method: Specify Minimum, Design, and Maximum Flow

Minimum Flow: 0 cfs

Design Flow: 500 cfs

Maximum Flow: 1800 cfs

Table 1 - Summary of Culvert Flows at Crossing: Michaels Way

Headwater Elevation (ft)	Total Discharge (cfs)	Culvert 1 Discharge (cfs)	Culvert 2 Discharge (cfs)	Roadway Discharge (cfs)	Iterations

Site Data - Culvert 2

Site Data Option: Culvert Invert Data

Inlet Station: 0.00 ft

Inlet Elevation: 387.77 ft

Outlet Station: 114.60 ft

Outlet Elevation: 386.60 ft

Number of Barrels: 1

Culvert Data Summary - Culvert 2

Barrel Shape: Pipe Arch

Barrel Span: 103.00 in

Barrel Rise: 71.00 in

Barrel Material: Steel or Aluminum

Embedment: 0.00 in

Barrel Manning's n: 0.0280

Culvert Type: Straight

Inlet Configuration: Headwall

Inlet Depression: None
