Flow Title : Plumtree_E_Pond 1
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f09

Plan Description:
Proposed condition which includes grading for online storage in Plumtree Branch above Michaels Way. (Pond 1)

Plan Summary Information:
Number of: Cross Sections = 85 Multiple Openings = 0
Culverts = 6 Inline Structures = 0
Bridges = 2 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Warning: During the supercritical analysis, the program could not converge on a supercritical answer in the downstream cross
section. The program used the solution with the least error.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Culv WS Outlet (ft)	362.07	Weir Avg Depth (ft)	0.91
Culv Nml Depth (ft)	5.00	Weir Flow Area (sq ft)	290.58
Culv Crt Depth (ft)	5.00	Min El Weir Flow (ft)	371.57

Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f05

Plan Description:
Proposed condition which includes grading for online storage in Plumtree Branch between Hearthstone Rd and Michael's Way. (Ponds 2-4)

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 6	Inline Structures	=	3
	Bridges	= 2	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note:    During supercritical analysis, the culvert direct step method went to normal depth.  The
program then assumed
         normal depth at the outlet.
Note:    During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Culv Crt Depth (ft)	2.21	Min El Weir Flow (ft)	371.57

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Culv Crt Depth (ft)	5.00	Min El Weir Flow (ft)	371.57

Warning: During the culvert outlet control computations, the program could not balance the culvert/weir flow. The reported
outlet energy grade answer may not be valid.
Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Warning: During the culvert inlet control computations, the program could not balance the culvert/weir flow. The reported
inlet energy grade answer may not be valid.
Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.

Upstream Embankment side slope              =       0 horiz. to 1.0 vertical
Downstream Embankment side slope            =       0 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow =     .98
Elevation at which weir flow begins         =
Energy head used in spillway design         =
Spillway height used in design              =
Weir crest shape                            = Broad Crested

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
       Pressure and Weir flow
           Submerged Inlet Cd          =
           Submerged Inlet + Outlet Cd =      .8
           Max Low Cord                =

Additional Bridge Parameters
       Add Friction component to Momentum
       Do not add Weight component to Momentum
       Class B flow critical depth computations use critical depth
           inside the bridge at the upstream end
       Criteria to check for pressure flow = Upstream energy grade line

HY-8 Culvert Analysis Report

Project Notes

Project Title: Valley Mede Flood Study

Designer: CEL

Project Date: Monday, September 25, 2017

Notes: HY-8 for Country Lane pond (Pond #5) concept barrel.

Project Units: U.S. Customary Units

Outlet Control Option: Profiles

Exit Loss Option: Standard Method

Crossing Notes: Pond 5 - Country Ln

Crossing Discharge Data

Discharge Selection Method: Specify Minimum, Design, and Maximum Flow

Minimum Flow: 0 cfs

Design Flow: 50 cfs

Maximum Flow: 90 cfs

Table 1 - Summary of Culvert Flows at Crossing: Pond 5 - Country Ln

Headwater Elevation (ft)	Total Discharge (cfs)	Pond Barrel Discharge (cfs)	Roadway Discharge (cfs)	Iterations
400.00	0.00	0.00	0.00	1
401.30	9.00	9.00	0.00	1

Site Data - Pond Barrel

Site Data Option: Culvert Invert Data

Inlet Station: 0.00 ft

Inlet Elevation: 400.00 ft

Outlet Station: 85.00 ft

Outlet Elevation: 399.50 ft

Number of Barrels: 1

Culvert Data Summary - Pond Barrel

Barrel Shape: Circular

Barrel Diameter: 3.00 ft

Barrel Material: Concrete

Embedment: 0.00 in

Barrel Manning's n: 0.0120

Culvert Type: Straight

Inlet Configuration: Square Edge with Headwall

Inlet Depression: None

Flow Title : Plumtree_G_Pond 5
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f14

Plan Description:
Proposed condition which includes grading to combine the existing ponds at Country Lane. (Pond 5)

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 6	Inline Structures	=	0
	Bridges	= 2	Lateral Structures	=	0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note:    During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note:    The culvert inlet is submerged and the culvert flows full over part or all of its length.
Therefore, the culvert inlet
         equations are not valid and the supercritical result has been discarded.  The outlet answer
will be used.

  Culv Crt Depth (ft)         2.76    Min El Weir Flow (ft)     371.57

Note:    Multiple critical depths were found at this location.  The critical depth with the lowest,
valid, water surface was used.
```

Note: During the supercritical calculations a hydraulic jump occurred at the outlet of (leaving) the culvert.
Warning: During the supercritical analysis, the program could not converge on a supercritical answer in the downstream cross
section. The program used the solution with the least error.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Note: The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the
height of the culvert.
Note: Culvert critical depth exceeds the height of the culvert.
Note: During the supercritical calculations a hydraulic jump occurred inside of the culvert.
Note: The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet
equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Flow Title : Plumtree_H_All Options
Flow File : i:\5635 - SHA OHD\49 - Valley Meade Flood Study\H&H\HEC-RAS\Plumtree_201709\ValleyMede_Plumtree.f07

Plan Description:
Proposed condition which includes grading for online storage in Plumtree Branch between Hearthstone Rd and Michael's Way and above Michaels Way. (Ponds 1-4) Grading to combine the existing ponds at Country Lane. (Pond 5) Replacing the Frederick Rd, US 40, Longview Dr, Brookmede Rd, and Hearthstone Rd culverts with bridges. Diversion pipe from RS 6454 to RS 4289.

Plan Summary Information:

Number of:	Cross Sections	= 85	Multiple Openings	=	0
	Culverts	= 1	Inline Structures	=	3
	Bridges	= 7	Lateral Structures	=	1

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed only where necessary
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Average Conveyance
Computational Flow Regime: Mixed Flow

Warning: At least one culvert in the culvert group has supercritical flow at the outlet. However, since more than one culvert
in the culvert group has flow, the program cannot determine if the downstream cross section should be subcritical or
supercritical flow. The program used the downstream subcritical answer, even though it may not be valid.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: At least one culvert in the culvert group has supercritical flow at the outlet. However, since more than one culvert
in the culvert group has flow, the program cannot determine if the downstream cross section should be subcritical or
supercritical flow. The program used the downstream subcritical answer, even though it may not be valid.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Warning: During the supercritical analysis, the program could not converge on a supercritical answer in the downstream cross
section. The program used the solution with the least error.
Note: During supercritical analysis, the culvert direct step method went to normal depth. The program then assumed
normal depth at the outlet.
Note: The flow in the culvert is entirely supercritical.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation
was used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Warning: The pure energy/weir calculations did not converge within the given number of iterations.
Note: The downstream water surface is below the minimum elevation for pressure flow. The sluice gate equations were
used for pressure flow.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected
from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.
Note: For the cross section inside the bridge at the downstream end, the water surface and energy are based on critical
depth over the weir.

Warning: The energy equation could not be balanced within the specified number of iterations. The program used critical
depth for the water surface and continued on with the calculations.
Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross
sections.
Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than
1.4. This may indicate the need for additional cross sections.
Warning: During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated
water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The
program defaulted to critical depth.
Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Appendix H-10

Plumtree Branch: Option I Hydraulic Modeling

SCS TR-55 RUNOFF CURVE NUMBER

JOB NAME: Valley Mede Flood Study, Howard County
Ultimate Land Use, Fair Conditions - Undeveloped Parcels as Woods in Good Condition
Drainage Area #5

DATE: 09/21/17
JOB NO.: 5635-49

COMPUTED BY: CEL
CHECKED BY: ALH

STUDY POINT: E: Little Plumtree Branch at Michael's Way

CONDITION: X ULTIMATE
EXISTING

RUNOFF CURVE NUMBER COMPUTATION
